Archives internal email from Hosted Exchange		✓

Enterprise-class email security

Use Advanced Security to better protect Hosted Exchange

Increased protection against Spam and Viruses
Advanced Security adds an additional layer of protection against spam and virus threats, ensuring that +99% of all spam is identified and removed before it reaches your Hosted Exchange mailbox.

Instead of being deleted, spam is quarantined for 14 days where you can inspect and re-send messages you wish to receive using the Advanced Security online interface.

Secure email archiving
For organisations that require a secure, off-Exchange copy of their email, Advanced Security archives all inbound, outbound and internal email for up to 10 years.

Your business email is indexed, compressed and securely archived in real-time at twin geographically independent datacentres. From within the Advanced Security online interface you can view and retrieve each email independently, or group thousands by date, providing you with the tools to recover archived emails quickly and easily back into your Hosted Exchange mailbox.

Secure email archiving for up to 10 years
